

MATH 3070 — Theory of Numbers
Fall 2022

Assignment Instructions

Some general suggestions and rules for all assignments:

- Please write *clearly* and *legibly*. Write in full sentences, and not just strings of equations.
- *Handwritten* is fine, unless you are “fluent” in \LaTeX (no need to waste time and energy on typesetting). It may help to first do your work in rough form, and then write out a “good copy”.
 - ★ If you decide to use typesetting, only \LaTeX , the “industry standard” in mathematics, will be accepted. All other formats (such as MS Word) should be avoided.
- You may work together. However, I do expect you to write up your *own* copy in your *own* words. Wholesale copying will be detected, and will not be tolerated. Remember that the assignments are an essential part of learning the material. You only cheat yourself if you just copy the work from others.
- Late assignments are *not* normally accepted. If there are valid special circumstances (medical reasons, etc.), please talk or write to me, and I may, or may not, accept a late assignment. If I do, no points will be taken off, but I cannot guarantee a timely return of the assignment.
- There will likely be *10* assignments. The one with the lowest grade, including any missed assignment (= 0 points), will be *dropped* from the final homework score.
- Assignments are due at the *beginning* of the class on the due date. The due date of each assignment will be listed on your assignment sheet. Usually, you will have one week to complete your assignment, but in occasional circumstances you will have two weeks.
- Please *staple* the pages together. Paperclips get entangled and pages may get lost.
